

$$\begin{bmatrix} 1 & 0 & 3 & 32 \\ 0 & 1 & -1 & 7 \\ 0 & 0 & 0 & 0 \end{bmatrix}$$

$x \quad y \quad z =$

reduced  
form

Translate to the solution set:

$$\left. \begin{array}{l} 1x + 0y + 3z = 32 \\ 0x + 1y - 1z = 7 \\ 0x + 0y + 0z = 0 \end{array} \right\} \Rightarrow \begin{array}{l} \textcircled{x} + 3z = 32 \\ \textcircled{y} - z = 7 \\ 0 = 0 \end{array}$$

leading  
variables

$z$  free

$$\begin{aligned} x &= 32 - 3z \\ y &= 7 + z \end{aligned}$$

$$\begin{cases} x = 32 - 3t \\ y = 7 + t \\ z = t \text{ (arbitrary)} \end{cases}$$

If we require  $x \geq 0$ ,  $y \geq 0$ ,  $z \geq 0$ ,  
then this places restrictions on  $t$ :

$$0 \leq 32 - 3t \Rightarrow 3t \leq 32 \Rightarrow t \leq \frac{32}{3}$$

$$0 \leq 7 + t \Rightarrow -7 \leq t$$

$$0 \leq t$$

Restricted solution set:

$$\begin{cases} x = 32 - 3t \\ y = 7 + t \\ z = t \text{ where } 0 \leq t \leq \frac{32}{3} \end{cases}$$

If  $x, y, z$  have to whole numbers,  
then  $t$  has to a whole number:

$$\begin{cases} x = 32 - 3t \\ y = 7 + t \\ z = t \text{ where } t = 0, 1, 2, \dots, 10 \end{cases}$$
